EXHIBIT A
SCOPE OF WORK

CONSULTANT shall provide the following services in connection with ambient particulate matter monitoring services at the 9900 Wilshire Boulevard (or "Site") project ("Project").

Task 1 – Mobilization

CONSULTANT anticipates that the following monitoring devices and peripherals shall be required for this Project and shall procure them for this Project:

Three DustTrak™ (or similar) monitors for Particulate Matter (PM₁₀) monitoring;

An anemometer to measure the local wind speeds and directions;

A security enclosure for each dust monitor to prevent tampering;

A visual alarm (e.g., strobe light or similar) for each dust monitor; and

Power supplies.

CONSULTANT shall also download the wind speed and direction data from a nearby meteorological station operated by the South Coast Air Quality Management District to assess the predominant wind conditions at the Site.

Once mobilized to the Site, CONSULTANT shall assess the available and appropriate infrastructure to support the monitoring devices and data transmittal, for example, electricity, internet connectivity, concrete slab, poles, etc.

Task 2 – Pre-Construction Baseline Monitoring

Upon completion of Task 1, PM₁₀ concentrations shall be continuously monitored by CONSULTANT using the DustTrak (or similar) monitors for a period of one week (including both weekdays and weekend). The DustTrak will record data at 5-minute intervals.

As stipulated in the EIR, at least one DustTrak monitor shall be placed at El Rodeo Elementary School's southern perimeter and another monitor beyond the project boundary where the general public could be present for periods of more than one hour. The third monitoring location shall be selected by CONSULTANT based on the prevailing daytime wind directions.

Task 3 – Monitoring during Project Demolition

Based on the 9900 Wilshire Project schedule, it is estimated that Project related demolition shall occur between early June and mid-August 2014. However, activities related to utilities (e.g., water pipe installation) will not be completed until the end of November 2014, which could generate fugitive emissions. In order to minimize cost, CONSULTANT shall train the Environmental Monitor for the project so that s/he understands how to display and read the data from DustTrak. CONSULTANT shall pre-set the alarm at 150 micrograms per cubic meter (µg/m³) based on a 1-hour average PM₁₀ concentration to provide sufficient warning for the Environmental Monitor and the on-site construction managers/supervisors to implement

corrective measures. The applicable standard is a 5-hour rolling average PM₁₀ concentration not to exceed 50 µg/m³ as determined by the difference between the upwind and downwind stations. CONSULTANT personnel shall visit the Site once every two weeks to inspect the DustTrak monitors and the anemometer and to download the PM₁₀ data.

Task 4 – Data Analyses and Reporting

Data from the DustTrak monitors shall be downloaded to a computer via the manufacturer supplied software. CONSULTANT shall then calculate the rolling 1-hour and rolling 5-hour average PM₁₀ concentrations for each of the monitoring locations. The monitoring methodology and the results from both the pre-construction baseline and during the project demolition shall be documented in a CONSULTANT report.

Task 5 – Meetings with the CITY/Beverly Hills Unified School District

For planning purposes, CONSULTANT has budgeted one meeting with the CITY, Stegeman and Kastner, and other Project participants.
