

CITY OF BEVERLY HILLS  
**TRAFFIC & PARKING COMMISSION**

June 4, 2015

**TO:** Traffic & Parking Commission  
**FROM:** Aaron Kunz, Deputy Director of Transportation  
**SUBJECT:** Presentation of Parking Inventory Tool

---

Beverly Hills contracted with Kimley-Horn in 2012 to conduct a parking inventory for the central business district. Kimley-Horn conducted the inventory based on field inventory and review of City business and parking records. The Parking Services Division managed the agreement to develop this tool.

It is anticipated that the Community Development Department will be the primary user of the parking inventory tool as it provides:

- 1) A comprehensive system to compile and update parking data;
- 2) Ability to visualize parking data through mapping (GIS);
- 3) An interface between land-use and parking data;
- 4) Data for studies related to policy projects (e.g., in-lieu parking study); and
- 5) Data for studies related to development projects.

As the primary user of the parking inventory tool, the Community Development Department – Transportation Planning Division will manage the on-going maintenance and updates of the Parking Inventory Tool.

Brett Wood of Kimley-Horn will provide an overview of the parking inventory tool at the June 4, 2015 Traffic & Parking Commission meeting.
